

Pastele abrazive sunt amestecuri de abrazivi sintetici si produse petroliere, cu consistenta solida sau semifluida recomandate pentru slefuirea, finisarea, lustruirea sau rodarea materialelor feroase sau neferoase.

PASTE SOLIDE:

Pastele solide se folosesc impreuna cu produse din pasla, discuri textile sau perii de sisal pentru operatii de slefuire si lustruire.

Se comercializeaza sub forma de batoane de 150x37x37mm.

Pastele solide se spala cu apa calda si detergent sau petrol.

Pasta roz:

Cod - PROZ 150x37 11A180*.

Utilizare: - pregatirea suprafetelor din otel pentru acoperire galvanica;
- finisarea constructiilor metalice din inox austenitic;
- finisarea rocilor;
- finisare aluminiu.

Pasta alba:

Cod: - PALB 150x37 33A320*, 33A1000*.

Utilizare: - pregatirea suprafetelor din alama turnata pentru acoperire galvanica;
- finisarea constructiilor metalice din inox austenitic;
- finisarea obiectelor din alama.

Pasta albastra:

Cod: - PALBASTR 150x37 11A800*.

Utilizare: - lustruirea obiectelor metalice.

Pasta verde:

Cod: - PVERDE 150x37 33A320*, 33A1000*.

Utilizare: - luciu oglinda pe suprafetele din otel inoxidabil.

Pasta plastic:

Cod: - PPLASTIC 150x37 11A120*.

Utilizare: - lustruirea obiectelor din plexiglas.

PASTE SEMIFLUIDE:

Pastele semifluide se folosesc pentru rodarea partilor componente ale motoarelor, angrenajelor si a robinetilor. Se comercializeaza ambalate in recipiente de plastic de 1 kg. Se spala cu petrol.

Pasta rodaj:

Cod: - PRODAJ 21C280*, 21C600*

Utilizare: - rodarea sertarelor de robineti si a scaunelor de supape.

Pasta grafit:

Cod: - PGRAFIT11A180*

Utilizare: - rodajul angrenajelor pinion-roata dintata pentru reducerea vibratiilor si a zgomotului.

* La cerere se pot executa si alte dimensiuni sau granulatii.

Abrasive pastes are solid or semi-fluid mixtures of synthetic abrasives and petroleum products for finishing, polishing or lapping of different ferrous and nonferrous materials.

SOLIDE PASTES:

Solid pastes are 150x37x37 mm bars and are used together with felt products, textile discs or sisal rotary brushes for grinding and polishing. Solid pastes can be washed with hot water and detergent or petroleum.

Pink paste:

Code: - PROZ 150x37 11A180*.

Used for: - preparing the steel surfaces for galvanic treatment;
- finishing of austenitic stainless steel constructions;
- stone finishing;
- aluminum polishing.

White paste:

Code: - PALB 150x37 33A320*, 33A240*.

Used for: - preparing the cast brass surfaces for electroplating;
- surface finishing of austenitic stainless steel constructions;
- surface finishing of cast brass objects.

Blue paste:

Code: - PALBASTR 150x37 11A800*.

Used for: - polishing of metallic surfaces.

Green paste:

Code: - PVERDE 150x37 33A320*, 33A1000*.

Used for: - mirror polishing on stainless steel.

Paste for plastics:

Code: - PPLASTIC 150x37 11A120*.

Used for: - polishing of acrylic objects.

SEMIFLUID PASTES:

Semifluid pastes are used for rodage of motor gear assemblies, motor valves, and tap valves. Semifluid pastes are sold in 1 kg plastic jars. Can be washed with petroleum.

Rodage paste:

Code: - PRODAJ 21C280*, 21C600*.

Used for: - rodage of motor valves and tap valves.

Graphite paste:

Code: - PGRAFIT11A180*.

Used for: - rodage of gear assemblies to minimize the noise and vibrations.

* Other dimensions and grits can be produced upon request.
